Preface.....	xvii
Author	xix

Chapter 1 Principle of Membrane Filtration	1
1.1 Classification of Filtration	1
1.1.1 Surface Filtration and Depth Filtration	1
1.1.2 Crossflow Filtration and Dead-End Filtration	1
1.2 Filtration Theory	3
1.2.1 Concentration Polarization	3
1.2.2 Resistance in Series Model	5
1.2.3 Cake Layer Compaction	6
1.2.3.1 Mechanism.....	6
1.2.3.2 Structure of Cake Layer.....	7
1.2.3.3 Model Equation	8
1.2.3.4 Self-Acceleration of Cake Layer Compaction under Constant Flux Mode	9
1.2.4 Dynamic Membrane.....	9
1.2.5 Particle Back-Transport	12
1.2.5.1 Overview.....	12
1.2.5.2 Brownian Diffusion	13
1.2.5.3 Shear-Induced Diffusion.....	13
1.2.5.4 Inertial Lift	14
1.2.5.5 Total Back-Transport Velocity and Critical Flux.....	15
1.2.5.6 Effect on Cake Layer Structure	16
1.2.6 Critical Flux	18
1.2.6.1 Definition	18
1.2.6.2 Measurement.....	18
1.2.7 Effect of TMP on Flux	19
1.2.7.1 Theory.....	19
1.2.7.2 Where Do Submerged and Sidestream Membranes Stand in the Curve?.....	21
1.2.8 Effect of Membrane Resistance on Operating Flux.....	21
1.2.9 Effect of Temperature on Flux	23
1.2.10 Filtration Theory for Nonporous Membrane.....	24
1.3 Membrane Fouling	26
1.3.1 Constant Flux versus Constant Pressure	26
1.3.2 Membrane Fouling Roadmap.....	27
1.3.2.1 Constant Flux Mode	27
1.3.2.2 Constant Pressure Mode	28
1.3.2.3 Sudden TMP Increase.....	29
1.4 Effect of Membrane Surface Property on Flux	31
1.4.1 Streaming Zeta Potential of Membrane Surface.....	31
1.4.1.1 Definition and Measurement	31
1.4.1.2 Effect of Zeta Potential on Membrane Fouling	33

1.4.2	Contact Angle.....	34
1.4.2.1	Theory.....	34
1.4.2.2	Effect of Contact Angle on Membrane Fouling	36
1.4.3	Surface Roughness	37
1.4.4	Pore Size and Distribution.....	39
1.4.5	Internal Pore Connectivity	41
1.4.6	Limitation of the Theory.....	41
1.5	Membrane Chemistry and Manufacturing	42
1.5.1	Membrane Structure.....	42
1.5.2	Membrane Chemistry.....	43
1.5.3	Porous Membrane Manufacturing	45
1.6	Why Is Increasing Design Flux Hard in Membrane Process?	47
1.6.1	History of Flux	47
1.6.2	Self-Limiting Nature of Flux	48
1.6.3	Economic Constraints on Flux	49
Chapter 2	Membrane Process	51
2.1	Classification of Membrane Process	51
2.1.1	Depending on Pore Size	51
2.1.2	Membrane and Module Configuration	53
2.1.3	Sidestream MBR versus Submerged MBR	58
2.1.3.1	Sidestream MBR.....	58
2.1.3.2	Submerged MBR	59
2.1.4	Integrated versus Separated Membrane Tank	60
2.2	Hollow Fiber Membranes	62
2.2.1	Outside-In versus Inside-Out Filtration Mode	62
2.2.1.1	Outside-In Mode.....	62
2.2.1.2	Inside-Out Mode.....	63
2.2.2	Internal Pressure Loss	64
2.2.2.1	Overview.....	64
2.2.2.2	Theory.....	64
2.2.2.3	Internal Pressure and Flux Profile as a Function of Average Flux.....	66
2.2.2.4	Road Map of Flux Profile in Hollow Fibers	67
2.2.2.5	Effect of Internal Pressure Drop in Crossflow and Dead-End Modes	70
2.2.2.6	Commercial Modules	71
2.3	Flat Sheet Modules	72
2.4	Tubular Membrane	74
2.4.1	Tubular Membranes with Single-Phase Flow	74
2.4.1.1	Optimization Issue.....	74
2.4.1.2	Optimization of System Design and Operation.....	76
2.4.2	Tubular Membranes with Two-Phase Flow	77
2.4.2.1	Horizontally Mounted Tubular Membrane at High Crossflow Velocity	77
2.4.2.2	Vertically Mounted Tubular Membrane at Low Crossflow Velocity	77
2.5	Submerged Rotating Disc Modules	80
2.6	Filtration of Water with a Low Amount of Suspended Solids	81

2.6.1	Pressure Filtration	81
2.6.2	Vacuum Filtration.....	82
2.6.3	Effect of Flux on System Performance	82
2.6.4	Pathogen Removal	83
2.6.4.1	Log Removal Value	83
2.6.4.2	Virus Removal	84
2.6.4.3	Coliform Removal	86
2.7	Membrane Integrity Monitoring.....	86
2.7.1	Overview	86
2.7.2	Direct Method	88
2.7.2.1	Bubble Point Test	88
2.7.2.2	Pressure Decay Test.....	90
2.7.2.3	Diffusive Air Flow Test.....	92
2.7.2.4	Vacuum Decay Test	92
2.7.3	Indirect Method.....	93
2.7.3.1	Turbidity Monitoring	93
2.7.3.2	Particle Counting	93
2.7.3.3	Microbial Challenge Test.....	93
2.7.3.4	Nanoparticle Challenge Tests	95
2.8	Membrane Suppliers.....	95
Chapter 3	Submerged Membrane Process	97
3.1	Overview	97
3.2	Operation of Submerged Membrane	98
3.2.1	Permeate Drawing.....	98
3.2.1.1	Intermittent Permeate Drawing	98
3.2.1.2	Gravity-Driven Permeate Drawing.....	98
3.2.2	Intermittent Aeration.....	99
3.2.2.1	Intermittent Aeration with Defined Cycle	99
3.2.2.2	Intermittent Aeration with Undefined Cycle	102
3.2.3	Specific Air Demand and Specific Energy Demand.....	104
3.2.4	Removal Efficiency	106
3.2.4.1	Effluent Quality	106
3.2.4.2	Heavy Metals Removal.....	108
3.2.5	Membrane Cleaning.....	109
3.2.5.1	Backwashing.....	109
3.2.5.2	Maintenance Cleaning.....	109
3.2.5.3	Recovery Cleaning	110
3.2.6	Diffuser Cleaning and Maintenance	112
3.3	Fundamentals of Air Scouring in Submerged Membrane	114
3.3.1	Membrane Scouring Mechanism	114
3.3.2	Effect of Airflow on Membrane Fouling	117
3.3.3	Effect of Bubble Size on Flux	119
3.3.3.1	Overview.....	119
3.3.3.2	Flat Sheet	119
3.3.3.3	Hollow Fiber	123
3.4	Optimization of Submerged Hollow Fiber Module.....	124
3.4.1	Effect of Fiber Looseness.....	124
3.4.2	Effect of Fiber Flexibility.....	126

3.4.3	Effect of Internal Pressure Loss.....	128
3.4.3.1	Membrane Fouling Induced by Internal Pressure Loss....	128
3.4.3.2	Advantages of Long and Thin Hollow Fibers	128
3.4.3.3	A New Direction to Improve Hollow Fiber Membrane Performance.....	129
3.4.4	Hollow Fiber Dimension Optimization.....	130
3.4.5	Packing Density.....	132
3.4.5.1	Effect of Packing Density on Productivity	132
3.4.5.2	Packing Density of Commercial Modules.....	133
3.4.6	Effect of Fiber Location	133
3.4.7	Vertical Mount versus Horizontal Mount	135
3.4.8	Header Design	136
3.4.8.1	Bottom Header.....	136
3.4.8.2	Open Top Header.....	137
3.4.9	Connections among the Factors Affecting Module Optimization ...	138
3.5	Optimization of Submerged Flat Sheet Membrane	140
3.5.1	Overview	140
3.5.2	Design Parameters.....	140
3.5.3	Upflow Pattern and Its Effect on Fouling.....	141
3.5.4	Modified Module Design	143
Chapter 4	Activated Sludge Process	145
4.1	Overview	145
4.2	Wastewater Microbiology.....	147
4.2.1	Microorganisms.....	147
4.2.1.1	Virus	147
4.2.1.2	Prokaryote.....	147
4.2.1.3	Eukaryote.....	149
4.2.2	Bacterial Composition and Nutrient Requirement	150
4.2.3	Kinetics	152
4.2.4	Distinguished Microbial Properties of MBR from CAS	154
4.3	Operational Issues	155
4.3.1	Foaming.....	155
4.3.2	Sludge Bulking and Pin Floc.....	157
4.3.3	Sludge Rise in the Secondary Clarifier in CAS	158
4.3.4	Chemical Treatment	158
4.3.5	Effect of Foaming, Sludge Bulking, and Pin Floc in MBR	159
4.4	Nitrogen Removal.....	161
4.4.1	Nitrification	161
4.4.1.1	Mechanism.....	161
4.4.1.2	Effect of pH Level and Alkalinity	162
4.4.1.3	Temperature Effect	163
4.4.1.4	Dissolved Oxygen Effect	164
4.4.2	Denitrification	164
4.4.2.1	Effect of Oxidation Reduction Potential.....	164
4.4.2.2	Requirement of Readily Biodegradable COD	165
4.4.2.3	Oxygen Credit from Denitrification	166
4.4.2.4	Alkalinity Production from Denitrification.....	166
4.4.2.5	Simultaneous Nitrification and Denitrification	166

4.5	Phosphorus Removal	167
4.5.1	Biological Phosphorus Removal.....	167
4.5.2	Chemical Phosphorus Removal	169
4.5.2.1	Overview.....	169
4.5.2.2	Chemicals Used	169
4.5.2.3	Mechanism.....	170
4.5.2.4	Factors Affecting Removal Efficiency.....	171
4.5.2.5	Effect of the Me/P Ratio on Removal Efficiency	174
4.5.2.6	Toxicity of Inorganic Coagulant	175
4.6	BNR Process.....	176
4.6.1	Constraints in Process Design.....	176
4.6.2	MLE Process	177
4.6.3	Hyundai Advanced Nutrient Treatment Process.....	178
4.6.4	Modified UCT Process	179
4.6.5	Step Feed Process.....	181
4.6.6	Case Studies	182
4.6.6.1	Traverse City, Michigan, USA.....	182
4.6.6.2	Nordkanal, Germany (Brepols 2011).....	185
4.7	Posttreatment.....	188
4.7.1	Disinfection	188
4.7.2	Advanced Oxidation Process for Trace Organic Removal	190
4.7.3	Adsorption	191
4.7.3.1	Principle.....	191
4.7.3.2	Application for the Secondary Effluent Treatment.....	192
4.8	Rheology of Mixed Liquor	193
Chapter 5	Membrane Fouling in Membrane Bioreactor.....	197
5.1	Overview	197
5.2	Factors Affecting Membrane Performance	197
5.2.1	Mixed Liquor Suspended Solids	197
5.2.2	SMP and EPS	199
5.2.2.1	Definition and Quantification	199
5.2.2.2	Effect on Membrane Fouling.....	201
5.2.3	Organic Loading	203
5.2.3.1	Effect of F/M Ratio on Membrane Fouling.....	203
5.2.3.2	Effect of F/M Ratio on SMP/EPS.....	204
5.2.3.3	Effect of F/M Ratio on Membrane Fouling in Anaerobic MBR.....	204
5.2.3.4	Effect on Subsequent Reverse Osmosis Membrane Fouling in Water Recycle	206
5.2.4	Dissolved Oxygen.....	206
5.2.5	Fat, Oil, and Grease.....	207
5.2.6	Antifoam	208
5.2.7	Effect of Unsteady Operation.....	208
5.2.7.1	Normal Fluctuation of F/M Ratio.....	208
5.2.7.2	Shock Hydraulic Loading.....	210
5.2.7.3	Shock Organic Loading at Low DO.....	212
5.2.7.4	Shock Organic Loading at High DO	213
5.2.8	Water Temperature	213

5.2.9	Salinity	214
5.2.10	Shear Stress	217
5.2.10.1	MBR with Submerged Membrane.....	217
5.2.10.2	MBR with Sidestream Membranes.....	217
5.2.11	Nutrient Balance.....	218
5.2.12	Scaling.....	220
5.3	Mixed Liquor Characterization	221
5.3.1	Overview	221
5.3.2	Direct Method	221
5.3.2.1	Free Drainage Test.....	221
5.3.2.2	Time to Filter.....	222
5.3.2.3	Modified Free Drainage Test.....	222
5.3.2.4	Modified Fouling Index.....	222
5.3.2.5	Delft Filtration Characterization Method.....	224
5.3.3	Indirect Method.....	225
5.3.3.1	Capillary Suction Time.....	225
5.3.3.2	Colloidal TOC	226
5.3.3.3	Particle Size Analysis	227
5.3.3.4	Hydrophobicity of Floc.....	227
5.4	Methods to Reduce Fouling	228
5.4.1	Use of Biocarrier (Biofilm-MBR)	228
5.4.2	Use of Inorganic Coagulants and Adsorbents.....	230
5.4.3	Use of Water-Soluble Polymers.....	231
5.4.4	Experimental Methods	233
5.4.4.1	Quorum Quenching	233
5.4.4.2	Vibration of Membrane or Mixed Liquor.....	234
5.4.4.3	Electrical Field.....	236
5.4.4.4	Ultrasonication.....	236
5.5	Effect of Flow Balancing on Membrane Performance.....	237
5.5.1	Scouring Air.....	237
5.5.1.1	Cause of Unbalanced Scouring Air.....	237
5.5.1.2	Consequence	238
5.5.2	Permeate Drawing.....	239
5.5.3	Mixed Liquor Circulation.....	239
5.6	Excess Sludge Reduction Process	241
5.6.1	Principle	241
5.6.2	Sludge Reduction by Extending SRT: Economic Aspect.....	241
5.6.3	Sludge Disintegration Methods	243
5.6.3.1	Biological Method	243
5.6.3.2	Chemical Method	243
5.6.3.3	Physicochemical Method.....	244
5.6.4	Effect of Sludge Reduction Process on Nutrient Removal.....	246
5.6.5	Effect of Sludge Reduction Process on Membrane Fouling	247
5.6.6	Economics of Biosolid Reduction Process.....	248
5.7	Scalability of MBR from Laboratory Scale to Full Scale.....	249
Chapter 6	MBR Design.....	253
6.1	Lessons Learned from History.....	253
6.2	Pretreatment	254
6.3	Biological System Design.....	256

6.3.1	Organic Loading Rate or F/M Ratio	256
6.3.2	HRT/SRT	258
6.3.3	Oxygen Uptake Rate	258
6.3.4	Sludge Yield	259
6.3.5	Oxygen Demand.....	262
6.3.5.1	Overall Reaction	262
6.3.5.2	Oxygen Demand Calculation.....	263
6.3.6	Comparison of CSTR with PFR.....	265
6.3.6.1	Mixing Patterns in CSTR and PFR	265
6.3.6.2	Advantages and Disadvantages of PFR in the CAS Process	267
6.3.6.3	Advantages and Disadvantages of PFR in the MBR Process	267
6.4	Membrane System	269
6.4.1	Flux and Membrane Area	269
6.4.2	Specific Air Demand.....	270
6.4.3	Air Scouring System	270
6.5	Oxygen Transfer Efficiency	272
6.5.1	Theory	272
6.5.1.1	Standardized Oxygen Transfer Efficiency.....	272
6.5.1.2	OTE Estimation in Process Water/Mixed Liquor	273
6.5.2	Factors Affecting OTE.....	275
6.5.2.1	Diffuser Pore Size.....	275
6.5.2.2	Airflow Rate	276
6.5.2.3	Spatial Distribution of Diffuser	277
6.5.2.4	Diffuser Fouling	277
6.5.2.5	MLSS and Viscosity	278
6.5.2.6	SRT and F/M Ratio.....	278
6.5.2.7	Foaming	280
6.5.2.8	Biocarriers and Flow Pattern in Aeration Tank.....	282
6.5.3	OTE Measurement	283
6.5.3.1	Non–Steady State Absorption Method.....	283
6.5.3.2	Non–Steady State Desorption Method.....	285
6.5.3.3	Steady State Method.....	286
6.6	Oxygen Balance in MBR.....	287
6.7	Peak Flow Handling	288
6.8	Aeration Optimization.....	290
6.9	Planning Hydraulic Grade Line	291
6.10	Membrane Life Span	292
6.10.1	Factors Affecting Membrane Life.....	292
6.10.2	Manufacturer’s Estimation	293
6.10.3	Third Parties’ Estimation	294
6.11	Trace Organics Removal	296
6.11.1	Removal Mechanism.....	296
6.11.2	Factors Affecting Removal Efficiency	297
6.11.2.1	Effect of Hydrophobicity of Compound	297
6.11.2.2	Effect of Temperature.....	298
6.11.2.3	Effect of SRT	298
6.11.3	Removal Efficiency	299
6.11.4	Comparison with CAS Process	299

6.12	Oily Wastewater Treatment	301
6.12.1	Pretreatment	301
6.12.2	Produced Water	303
6.12.2.1	Characteristics of Produced Water	303
6.12.2.2	Optimum Design Parameters	304
6.12.2.3	Treatment Efficiency	304
6.12.3	Petroleum Refinery Wastewater	305
6.13	Excess Sludge Treatment	306
6.13.1	Overview	306
6.13.2	Sludge Pretreatment	306
6.13.3	Sludge Thickening or Dewatering	309
6.13.4	Sludge Stabilization	312
6.13.5	Sludge Disposal	313
6.14	Practical Issues in MBR Design	314
6.15	Power Costs	316
6.15.1	Blower	316
6.15.2	Pump	318
6.15.3	Motor	319
6.15.4	Power Factor	319
6.15.5	Price of Electrical Power	321
6.15.6	Case Example No. 1: MBR with Submerged Membranes	321
6.15.6.1	Condition and Assumption	321
6.15.6.2	Results	323
6.15.7	Case Example No. 2: MBR with Crossflow Membranes	324
6.16	Capital Expenditure	328
6.17	SED of Submerged MBR	329
6.18	Operating Expenditure	331
Chapter 7	Other Applications	333
7.1	Direct Membrane Filtration of Wastewater	333
7.1.1	Overview	333
7.1.2	DMF Based on Tubular Membrane	333
7.1.3	DMF Based on Submerged Membrane	334
7.2	Membrane Contactors for Gas Transfer	336
7.2.1	Overview	336
7.2.2	Fundamental Issues Associated with Membrane Contactors	340
7.2.2.1	Lumen Condensation	340
7.2.2.2	Pore Wetting	341
7.2.2.3	Biofilm Control Issue	342
7.2.3	Water Vapor Condensation Modeling	342
7.2.4	Oxoanion Removal	343
7.2.5	Membrane Distillation	345
7.3	Membrane Process for Water Reclamation	348
7.3.1	Nonpotable Reuse	348
7.3.2	CAS Microfiltration or Ultrafiltration versus MBR as a Pretreatment of Reverse Osmosis	350
7.3.3	Indirect Potable Reuse	353
7.3.3.1	Concept	353
7.3.3.2	Reclaimed Water Quality	354
7.3.3.3	Groundwater Replenishment System	355

7.3.4	Membrane Integrity Test/Monitoring	356
7.3.4.1	Overview.....	356
7.3.4.2	Method of Using Conductivity, TOC, and Sulfate	356
7.3.4.3	Method of Using Fluorescent Dye.....	357
7.4	Anaerobic MBR.....	359
7.4.1	Overview	359
7.4.2	Biological Aspect of AD	362
7.4.3	Advantages and Disadvantages Over Conventional AD.....	363
7.4.4	Membrane Fouling	365
7.4.5	Design of Mesophilic AnMBR	366
7.5	High-Retention Membrane Bioreactor	368
7.5.1	MBR with Nanofiltration Membrane	368
7.5.2	Application of Forward Osmosis to MBR.....	370
7.5.2.1	Principle of Forward Osmosis	370
7.5.2.2	Challenges of FO	371
7.5.2.3	Energetics.....	373
7.5.2.4	FOMBR	374
7.6	MBR with Woven or Nonwoven Textile Filter	376
7.6.1	Overview	376
7.6.2	Factors Affecting the Performance	377
7.6.3	Operating Experiences in Literature.....	378
7.7	Thermophilic MBR	380
	References	383
	Abbreviations	407
	Unit Conversion	411
	Index	413
